

Amendments to the Claims:

The following listing of claims will replace all prior versions, and listings, of claims in the application:

Claims 1-59 (cancelled)

60. (Currently Amended) An antenna, comprising:

a dielectric substrate in or on which a planar element that is conductive, and ~~is fed at~~ has a feed position is integrally formed; and

a ground pattern that is juxtaposed with said dielectric substrate and is formed to have a tapered shape with respect to said feed position, and

~~characterized in that~~ wherein said planar element has a cut-out portion formed ~~from~~ at an edge portion ~~farthest from said feed position toward~~ being opposite to the ground pattern side of said planar element.

61. (Currently Amended) A wireless communication card, comprising:

a dielectric substrate in or on which a planar element that is conductive and ~~fed at a~~ has a feed position is integrally formed; and

a board on which said dielectric substrate is mounted, and in or on which a ground pattern that is juxtaposed with said dielectric substrate is formed, and

~~characterized in that~~ wherein said dielectric substrate is mounted at an end portion of said board, and

said ground pattern is formed to have a tapered shape with respect to said feed position, and a region extending toward at least either of a right side and a left side of said dielectric substrate, and

said planar element has a cut-out portion formed ~~from~~ at an edge portion ~~farthest~~
~~from said feed position toward~~ being opposite to the juxtaposed ground pattern side of said
planar element.
